

Hydrant Hat L.L.C.
P.O.Box 278
Ashtabula, Ohio 44004

PROBLEM SOLVER

The Hydrant Hat™ is designed to reduce maintenance and prevent serious bodily injury involving fire hydrants. Hydrants that are located on or near playgrounds, athletic fields, walkways, bikeways, bus areas or anyplace where student activities take place should be covered with a Hydrant Hat™.

A minimal investment in this product will provide long term savings and safety protection in all school environments. In a time where school funding is limited the cost of the Hydrant Hat™ may be offset by having parent support organizations, local civic groups or businesses sponsor the units. School logos and mascots can be applied to the sides of the unit by using vinyl decals with adhesive backing.

The Hydrant Hat™ is 42 inches in height and weighs 31 lbs. It is made of polyethylene with ultra violet inhibitors molded into the construction to provide years and years of durable protection. The base has securing tabs or “flexible fingers” to secure the unit to the hydrant.
